PROFILE

Game designer with a Distinction MA in Games Design and a year of professional experience at Ammobox Studios. Designs combat and systems in Unity and Unreal, and validates ideas through playtesting, with an award-winning final year project.

EXPERIENCE

Junior Game Designer, Ammobox Studios
Jun 2024 – Jun 2025
Kuala Lumpur, Malaysia

- Designed character abilities, loadout options, game modes and gameplay systems for competitive games.
- Created UI layouts and navigation flow for UI artists.
- Conducted sanity tests and wrote production bug reports for development teams.
- Implemented level designs in Unreal Engine.
- Wrote and maintained design documentation, and collaborated with the team through Notion.

Intern Game Programmer, Rcade Studio
Jan 2023 – Apr 2023
Kuala Lumpur, Malaysia

- Implemented combat abilities for a playable character.
- Reviewed and refactored character state machine, shop UI and prototyped a daily login rewards system.
- Integrated visual effects, animation, UI and audio created by team members into the game.
- Participated in internal playtests and provided feedback.

SKILLS

Design
Combat, Systems, Gameplay, Narrative, UI/UX

Tools / Engines
Unity, Unreal Engine 4/5, Godot, Love2D, Version Control (Git, Github Desktop, SourceTree, TortoiseSVN), Notion, Blender, Photoshop

Programming Languages
C#, Unreal Blueprints, C++, Python, Lua

Audio
FMOD, FL Studio, Audacity

EDUCATION

BSc (Hons) in Computer Games Development
Asia Pacific University
CGPA: 3.52 / 4.0
Mar 2021 – May 2024

MA Games Design
Teesside University
Award: Distinction
Sep 2025 – Sep 2026

PROJECTS

Amidst Blooming Melodies | Sep 2026
Designer & Programmer | Unity
Proof of concept prototype developed as part of my Masters project to investigate how audiovisual and narrative design affects subjective combat experience.

- Designed a health mechanic where players purify corrupted enemies instead of killing them, and the health circle also acts as a puzzle tool.
- Built a modular ability system that took a 3-phase boss fight with varying moveset each phase from nothing to functional in under 5 days.
- Ran a between-subjects playtest with 14 players across two builds, which found that audiovisual and narrative design had the strongest effect on emotional impression and long-term memorability.
- Designed and modelled the protagonist and collaborated with an artist to create concept art.
- Drafted the boss theme in FL Studio and wrote lyrics tied to the story, then collaborated with a music producer to create the full track with vocals, and implemented an adaptive soundtrack in FMOD.

Curse Breaker Awakening | May 2024
Designer & Programmer | Unity
A first-person dungeon crawler roguelike with procedural level generation developed as my final year project at Asia Pacific University.

- Developed a modular procedural dungeon generation system that follows the SOLID principles, with parameters to customize generation results.
- Designed fast movement and environmental interaction (wall-running, throwing objects and stunned enemies) as the core combat toolkit, and playtested it with 30 players.
- Designed a two-phase boss fight around the same toolkit, where the arena collapses into a second one surrounded by lava. In playtests, players discovered strategies such as throwing enemies into the lava and using the fallen pillars to block projectiles.

AWARDS & ACHIEVEMENTS

- Best Final Year Project, Asia Pacific University, 2024
- Rank #8, University GameDev League, 2023
- Invited Speaker, APU Game Development Club

GAME JAMS

- Mini Jam 114 (2022)
- Lv 99 Game Jam (2023)
- University GameDev League (2023)
- GMTK Game Jam (2023)
- Typical Game Jam (2024)
- Red Games Jam by AirAsia (2024 and 2025)
- GameDev.tv Game Jam (2025)
- DrinkDevs Game Jam (2025 and 2026)
